

## Configuration of Proxy setting on Thin Clients with Windows OS

- Log in to your Thin Client and connect to your desktop (Windows 10)
- Press the **Windows**  + **I** keys simultaneously to access the Windows Settings menu.
- In the Settings window, Click **Network & Internet**, in left side pane choose **Proxy**.
- On the right side pane, under “Automatically detect settings” and “Use Setup script”:  
Turn **Off** the toggle button as shown in the below figure.

- Under the **Manual proxy Setup** section as shown in the image below, set “Use a Proxy Server” toggle to **On** and provide the proxy server details.

**Manual proxy setup**

Use a proxy server for Ethernet or Wi-Fi connections. These settings don't apply to VPN connections.

Use a proxy server

☒ On

Address  Port

Use the proxy server except for addresses that start with the following entries. Use semicolons (;) to separate entries.

☒ Don't use the proxy server for local (intranet) addresses

- In the Address field, type the Address: **http://proxy.igcar.gov.in**
- In the Port field, type the port number: **3128**
- Under exceptions text box type the following entries.  
**\*.igcar.gov.in;\*.anunet.in;10.\*;172.16.\***

**(Note: The above exception list is not exhaustive. Any new intranet or anunet site which is not listed above has to be added in the exception list)**

- Check the box that says *“Don't use the proxy server for local (intranet) addresses”*
- Finally, click the **Save** button to apply the changes.

**Note: Chrome will automatically take the system proxy setting. For Firefox, open Firefox browser, Go to Settings -> Network Settings-> settings Click on “Use system proxy settings”.**
