

Procedure to access email server on Thin Clients

1. On the thin clients with Windows 10 OS, an application named '**Putty**' is provided on desktop. This can be used to connect to telnet based servers like e-mail servers.
2. Once **Putty** is opened enter the **IP address** of mail server in **Host Name(or IP address)** field
3. Select **Connection Type** as **Telnet** and Click **Open**

See the following figure for details:
